

2011 Census tables

The Office for National Statistics (ONS) are publishing around 500 different tables of results for the 2011 Census. The majority of these tables will be published down to output area level. There are four main types of 2011 Census tables released by ONS:

Key Statistics tables

Key Statistics tables provide summary figures that cover the full range of results from the Census. They include both numbers and percentages.

Quick Statistics tables

Quick Statistics tables contain statistics which refer to one variable and its response categories from a Census question. They include numbers only.

Local Characteristics tables

These tables have a minimum population threshold (size) of 100 persons and 40 households. They provide the most detailed results possible for very small geographies (output areas) and contain two or more variables.

Detailed Characteristics tables

These tables have a minimum population threshold (size) of 5,000 persons and 2,000 households. Similar to Local Characteristics tables, these contain two or more Census variables, such as age and sex, but provide considerably more detail than their local equivalents, as the larger population means the risk of disclosure of personal information is lower.

2011 Census tables online

[2011 Census tables](#) are available on the NOMIS website. This website enables you to pick a particular table of interest and then using a 'wizard query' select the geography and statistics you want from the table. You can then view and download data for the table. Alternatively there is a [2011 Census table finder](#) on the NOMIS website which you can use to search which tables cover the topic you are interested in.
