

Key Findings

'Our Community' Survey – interim (key indicator) results for all Cheshire West and Chester wards

May 2012

This key findings report outlines headline key indicators results for all Borough wards and highlights how they are performing in relation to the whole of Cheshire West and Chester.

Background

In October 2011, the 'Our Community' Survey was sent to 28,000 households throughout Cheshire West and Chester. Developed with local partners and key Council officers, the questionnaire captured residents' views of their local area and explored issues relating to quality of life. A re-run of a survey conducted in 2010 and based on the 2008 national Place Survey, the aim was to understand important issues and areas for improvement at a very local level, and monitor key indicators. About 7,000 responses were received from local residents, evenly spread across all wards in the Borough.

Key indicator results for all Cheshire West and Chester wards – how to use the tables

The following tables outline key results for all wards within the Borough. A green square illustrates where the result is, statistically, significantly better than the Borough average, a red square shows a result that is statistically significantly worse.

Further Information

A key findings document highlighting key indicator results for Area Partnership Boards is already available, and a series of additional reports outlining all results from the 2011 'Our Community' survey will be available shortly. These will include:

- headline results for the Borough, Area Partnership Boards and all Cheshire West and Chester wards
- results by key demographic groups, including gender and age.

For more information and the latest results, please visit www.cheshirewestandchester.gov.uk/researchpublications.
